

NMSU Fire Department (FD) receives equipment to support its CPR program.

The FD was awarded \$6,250 through the 2018 EMS “Local System Improvement Project” grant to purchase advanced CPR manikin simulators that offer real-time feedback to its instructors. The simulators will provide useful information to persons that want to learn proper CPR. Each year the fire department provides CPR certification courses to about 120 students, faculty and staff members. For more information go to fire.nmsu.edu or call us on the non-emergency number 646-2519 to inquire about CPR or fire safety classes.

Operation Entryway

The Facilities Maintenance shop is performing the final work for Operation Entryway in Foster Hall with an anticipated completion date of February 9, 2018. Operation Entryway freshens up the entryways, hallways, common areas, stairwells, and restrooms in the academic buildings. They paint, clean light fixtures, replace damaged ceiling tiles, replace restroom faucets and broken fixtures, and replaced stained carpet. The extent of replacements is governed by the BRR funding allocated to the department and if we are unable to perform a task, it is immediately added to our deferred maintenance list for future funding. Work will begin in Roberts Hall on February 12, 2018.

Andy Haggard is awarded the Golden Scooper

The Golden Scooper is awarded by an ICT staff member, to an ICT staff member who, through course of action, best represents those attributes of Shaun “Scooper” Cooper: leadership, fellowship, mentorship, integrity, intelligence, humor, ingenuity and a knack for mischief. Andy Haggard of PC Support was selected as the next recipient of the Golden Scooper because he is a leader, mentor, and a very humble individual with a high level of integrity. He is recognized by his fellow ICT coworkers as intelligent, humorous, and a great example of someone who understands how to provide top-notch customer service.

Campus Beautification

The Grounds shop personnel are conducting Spring Cleaning activities on campus. Currently, they are pruning trees, applying pre-emergent herbicide, mulching leaves, and preparing planters for spring flowers. Planter restoration includes removing all plant material, updating the drip irrigation system, planting and Xeriscaping.

Custodial Support

The Custodial team performed restorative floor maintenance in the Williams Art Gallery. This work was part of the opening preparations for the current exhibit. Stop by and check out the exhibit and the restored floor!
