

Professional Development

Francisco Guaderrama recently passed his State of New Mexico High Pressure Boiler Operators Examination and is now a licensed Plant Operator. Francisco works in the Central Utility Plant as a Plant Operator. The Central Plant operates 24 hours a day, 7 days a week and is required to have a licensed operator on duty at all times.

Preventive Maintenance

Grounds shop personnel are focusing efforts on activating the campus irrigation systems. The team will be checking for leaks, clean strainers, replace damaged heads, and adjust sprinklers to minimize watering of non-turf areas. This is a scheduled preventive maintenance task that is performed prior to the start of the growing season.
